

CASE STUDY

WATERLOGIC 4 at the Schwyz Hospital

The Schwyz hospital provides 24/7 medical and ambulance services to a region of over 60,000 people. This medical establishment is of the highest level involving a thoroughly qualified, yet humane service.

The hospital encompasses; surgical operations & orthopaedics, prescribed medicines, anaesthetics, radiology, obstetrics and gynaecology.

Each section has, at its disposal the very latest and best equipment and uses leading edge techniques in experimental medicine and therapies. This guarantees a high quality standard in its diagnostics, treatment, therapy and care.

Approximately 470 staff, treat 6000 patients carrying out over 40000 days of care each year.

WATERLOGIC DISPENSERS AT THE SCHWYZ HOSPITAL

Interview with Madame Maria Schöpfer, residential director at the hospital

What was your objective in installing these water dispensers?

The purpose was to provide cold or sparkling water to staff and patients. We call it 'l'eau de Schwyz' (or Schwyzerwasser to those Swiss who speak German). Our coolers are installed in the kitchens and in main offices.

CASE STUDY

Why did you decide to go for plumbed in water coolers?

We consider that filtered and purified main water has positive health benefits for both patients and staff. Furthermore, this eliminates the need to transport, store and administer bottled water.

What were your main considerations in deciding to switch from bottled to mains-fed coolers?

In the first place, our main considerations were ecology, health improvement, and also

to control costs whilst improving quality. The logistical demands in handling the bottles, to get a superior quality of drinking water, that was always on-tap and ready to drink also made this solution very attractive. The fact that we are also achieving a better overall cost for our drinking water is also a positive thing.

Do you rent or buy these machines?

We prefer to go for rental, which includes the full maintenance service, keeping the machine fully functional (impeccably so) and also hygienic to the required parameters of the hospital.

Are you staff happy with the new dispensers?

Our staff appreciate the quality and the unlimited and free supply of water. In this way, they do not need to buy their own drinking water or worry about recycling bottles.

How would you rate, overall the service from Waterlogic in Switzerland?

The service is delivered as promised, but more, the local support always convinces us that we made the right choice.

The fact that the service is both simple and yet thorough, is very far-sighted.

The Waterlogic dealer in Switzerland is thankful to Madame Maria Schöpfer for the time in completing this interview.

The Schwyz hospital uses 6 of the WL4 (Hot/Cold/Sparkling) dispensers.
