

## Zip HydroTap

A system that delivers filtered chilled, sparkling, and 98 °C hot water from a single tap. A sleek tap mounted above the countertop is combined with a powerful central unit installed in an undercounter cabinet, handling heating, cooling, and carbonation. The water is filtered down to 0.2 microns, effectively reducing particles, lead, microplastics, and up to 99.9 percent of microbiological cysts.

The system is developed for safe and energy-efficient operation. The hot water is set to 98 °C, while the tap remains cool to the touch and features safety locks for hot water. With R290 and energy-saving modes, both operating costs and environmental impact are reduced.

### Technical data

Water selection .....	Cold still, cold sparkling, hot
Cooling capacity ( $\Delta t=10^\circ$ ) .....	15 l/h
Dimensions (WxDxH) .....	46 x ca 140 x 216 mm
Dispensing height .....	126 mm
